Introduction

The Almanac of the 50 States has been created in order to provide a comprehensive, easy to use, state statistical reference book. It presents a general overview of every state, along with tables of comparative ranking.

The book is divided into two parts. The first, State Profiles, is comprised of 52 individual profile sections: one for each of the 50 states, one for the District of Columbia, and one for the US in summary. Each of these profiles is eight pages long, each utilizes the same format organized into 13 subject categories, and each has been compiled from the same sources of information. The result is a set of basic data profiles which are readable, understandable, and provide a strong basis for comparative analysis.

The individual profiles are the heart of the book and, as a rule, the editor has chosen to include that information which has the greatest general appeal to the broadest cross-section of users. No new surveys have been done, and each item of information has been collected from published sources. The profiles as a whole are reviewed in greater detail in the section below, The Profiles. Specific sources of origin for each item of information (along with definitions of terms), are presented in the following section, The Categories, Headings & Terms.

The second part of the book, Comparative Tables, is composed of tables of ranking. The 54 tables each list the states in rank order for a selected characteristic chosen from the state profiles. When read thoroughly and carefully, the tables are most informative: they clearly show how states compare to each other for a given characteristic, and when used together with the profiles they offer a rich resource for analysis.

The overall goal of Almanac of the 50 States is to bring together into a single volume a wide variety of diverse information and present it, state by state, in a clear, comprehensible format. It is a unique work, and one that should have broad use.

There are other books which cover the states from a different perspective and employ a different format. For readers doing more extensive research, it may be helpful to mention two of the best.

Statistical Abstract, the annual compilation of the Bureau of the Census is the preëminent annual statistical work on the United States. It draws material from governmental and non-governmental sources to create an expansive and revealing portrait of the nation. It has been a source of inspiration for this book, and its many charts, tables, and diagrams are an invaluable resource for the serious researcher.

The Book of the States, published by the Council of State Governments, is a bi-annual title which combines federal government data with the Council's own surveys. Its sections on both the executive and legislative branches of state government are particularly outstanding, and the book as a whole does an excellent job of presenting detailed information to a specialized audience.

As both of these works have a different function (and a different intended readership) than this almanac, both are excellent places to look for information not found here.

Two additional guiding suggestions can be made. First there are a number of fine subject bibliographies and guides to statistical sources which can be found in larger libraries. They describe the wealth of materials that are available in many areas touched on here. Second, those seeking more detailed data for a specific state should consider the publications of that state's departments and agencies. A good way to obtain an overview of what is available for a specific state is to contact the state documents librarian at the state library.

In order to continue to achieve its goals, Almanac of the 50 States will need to be revised and updated for each annual edition. The best suggestions for improvements in a book such as this come from regular users of the work. Therefore, ideas and comments are actively solicited. All communications should be directed to:

The Editor
Almanac of the 50 States

The Profiles

Almost all of the information in the profiles has been selected from federal government publications. This ensures an internal consistency and reliability of data that would not have been obtainable otherwise. Additionally, it enables users of this volume to go back to the more detailed original source materials and use the two in combination. Although relying on these sources limits the scope of the Almanac to what has been produced, the many advantages of the available data far outweigh any inadequacies.

For consistency, headings and terms used in the profiles have been carried over as they appear in the source materials. Those unfamiliar with government terminology may at times be puzzled by either the meaning of a specific term, or why the data was gathered in a certain way. Unclear terms are defined (as the data collection agency uses them), in the next section, The Categories, Headings & Terms. Additionally, a source of origin for each item of information is presented. This allows curious readers to refer to the original sources themselves which often contain both more detailed definitions, and explanations of data collection procedures.

In preparing the format of the profiles, the design has been structured to enable each profile to stand alone. The headings are clear, abbreviations have been avoided (with the exception of "$mil" for millions of dollars) and indents have been used to indicate subgroups of the main heading. However, because of the ease of reading, users are cautioned to keep in mind the specific wording of a heading, and to note whether a dollar amount, median (midway point), mean (average), or percent is being provided. Additionally, it should be pointed out that not all subgroups add to the total shown. This may be due to rounding, or the fact that only selected subgroups are displayed.

The Categories, Headings & Terms

A review of the 13 categories which make up each of the profiles appears below. Unless otherwise stated, all data has been collected from Statistical Abstract, 1985, and its supplements, State and Metropolitan Area Data Book, 1982, and City and County Data Book, 1983. In addition to citing the source of origin, the paragraphs contain a brief identification of terms, and some suggestions of additional source materials.

State Summary

The purpose of this section is to provide a general overview of the state, using key information from the other 12 categories.

Directory information has been obtained from the legislative manuals of the respective states, telephone directories, and other published sources. Leading industries have been abstracted from the latest available edition of County Business Patterns, an annual series from the Bureau of the Census.

Geography & Environment

Number of urban places was obtained from the 1980 Census of Population, all other information comes from Statistical Abstract.

General coastline figures represent the length of the outline of the coast. Tidal shoreline figures represent the shoreline of the outer coast, off-shore islands, sounds, bays, rivers, and creeks to the head of the tidewater. The original source of this information is The Coastline of the United States, 1975.

Demographics & Characteristics of the Population

The net migration, persons per square mile and racial data are from Statistical Abstract; all other items are derived from the 1980 Census of Population.

Urban persons are those who live in urbanized areas. An urbanized area may generally be defined as a population concentration of 50,000 persons or more, with a population density of at least 1,000 persons per square mile. Rural persons are all non-urban persons.

Net migration was computed by the Bureau of the Census by taking the 1970 population, adding births, subtracting deaths, and then comparing the result with the 1980 population. The difference is the net migration (always a positive number, unless preceded by a minus sign, "–").

Racial statistics are provided, although they are a highly sensitive subject. It is important to recognize that the breakdown represents the self identification of respondents in regard to pre-set census categories. It does not in any way denote any scientific or biological notion of race. Spanish origin is not a racial group as defined by the Bureau, and persons may be of any race and be of Spanish origin as well. There is a fairly lengthy discussion of the issues surrounding racial categories in the introductory and explanatory sections of the 1980 Census.

A household is defined as the person or persons occupying a housing unit. A housing unit is defined below, under Housing & Construction. Briefly, a housing unit is a separate set of living quarters such as a house, apartment, mobile home, etc. A family is a type of household and consists of a householder and one or more other persons living in the same household who are related to the householder by birth, marriage, or adoption. Married couples, and female heads of household with dependent children and no husband present, are subgroups, or types of families.

Vital Statistics & Health

All items in this category are from Statistical Abstract and its supplements, with the exception of 1982, 1983, and 1984 totals for births, deaths, marriages, and divorces which are taken from Monthly Vital Statistics Report.

All rates in this category are per 1,000 persons with the exception of the abortion rate, which is per 1,000 women.

Figures for physicians and dentists are counts of active non-federally employed practitioners. Physicians exclude doctors of osteopathy.

The National Center for Health Statistics, the Center for Disease Control, and the Health Care Financing Administration are the federal agencies which collect and publish the majority of health statistics. The professional associations of physicians, dentists, and hospitals also collect and publish statistical data in the field.

Education

School enrollment and educational attainment data are from the 1980 Census of Population, and institutions of higher learning are from Fall Enrollment in Higher Education (National Center for Education Statistics). All other items are from Statistical Abstract and its supplements.

Of potential interest to readers are the publications of the respective state departments of education which collect and publish school data often on a district by district level. Also, the National Education Association is a source of statistical information about schools and school finance.

Social Insurance & Welfare Programs

All items here have been obtained from Statistical Abstract and its supplements. It should be noted that data is provided for three major Social Security programs: those for the retired; for the survivors of enrollees; and for the disabled covered under the program.

The original source of Social Security Information is the Social Security Administration's Bulletin, and the Bulletin's Annual Statistical Supplement.

Housing & Construction

The Bureau of the Census conducts a decennial Census of Housing which is almost as extensive as its Census of Population. The selection of housing information here (taken from Statistical Abstract and its supplements), represents just a small portion of what is available.

The Bureau defines some key terms as follows: a "housing unit" is a house, apartment, mobile home or trailer, group of rooms, or single room occupied as a separate living quarter or, if vacant, intended as a separate living quarter. Separate living quarters are those in which occupants live and eat separately from any other persons in the building and which have direct access from the outside of the building or from a common hall.

Government and Elections

Information on state officials, the governorship, and state legislatures have been obtained from state legislative manuals and a telephone survey. Results of the 1984 presidential election have been obtained from news reports. Information on federal representation has been abstracted from Congressional Directory, and has been updated by news reports. State employees, 1984 is from Public Employment, 1984 (Bureau of the Census). Data on women holding public office has been abstracted from news releases from the Center for the American Woman and Politics at the Eagleton Institute at Rutgers University. Data for black elected officials is from Black Elected Officials: A National Roster, 1985 (Joint Center for Political Studies, Washington DC), and is reprinted with permission. All other information is from Statistical Abstract.

Readers should note that changes in the governorship resulting from the 1985 elections are indicated with asterisks. However, for clarity, when there has been a change in the officeholder, only the new governor is shown in the State Summary category.

State employees displays the total number of state employees (both full time and part time) in October, 1984, along with the October, 1984 payroll.

The numbers under local governments indicate the number of governmental units. This is not necessarily identical to the number of entities themselves. For example, although there are 14 counties in Vermont, there are no county governments. Hence a zero is indicated in the county space for Vermont.

Governmental Finance

Revenue, expenditure and debt information is from State Government Finance, 1983 (Bureau of the Census). All other information is from Statistical Abstract.

Crime, Law Enforcement & Courts

Crime rates and police agency information are from Uniform Crime Reports, 1984, figures for persons under correctional supervision originate in Handbook of Criminal Justice Statistics, 1983; and court data is from State Court Organization, 1980. All are publications of the Department of Justice. All other information is from Statistical Abstract.

Crime information displays totals and rates based on crimes known to police.

A court of general jurisdiction is one that has original jurisdiction over all subject matter and persons within its geographic limits, with the exception of those persons or subjects specifically assigned by statute to courts of limited or special jurisdiction. Courts of limited or special jurisdiction (such as juvenile courts and traffic courts) have jurisdiction over specified subjects and persons.

Labor & Income

Unemployment by reason for unemployment, civilian labor force by occupation, and civilian labor force by industry are from Geographic Profile of Employment and Unemployment, 1983. The 1984 unemployment rate, employees on non-agricultural payrolls, and the hours and earnings of production workers are from the May, 1985 issue of Employment & Earnings. Both are publications of the Department of Labor. All other information in this category is from Statistical Abstract and its supplements.

The civilian labor force includes all civilians who are either employed or unemployed. Generally, employed persons are those who: 1) did any work as a paid employee; or 2) worked 15 hours or more as unpaid employee in a family enterprise; or 3) had jobs but were not working due to illness, vacation, etc. Unemployed persons are those who: 1) had no paid employment and were both available for and looking for work; or 2) were waiting to be recalled to a job; or 3) were waiting to report to a new job. The participation rate represents the proportion of the population in the labor force. Children, the institutionalized and the retired are some groups generally not considered to be in the labor force.

Unemployed persons are grouped into four categories: a job loser is someone whose employment has ended involuntarily; a job leaver is someone whose employment ended voluntarily; a reentrant is someone who has previously worked, but was out of the labor force prior to seeking employment; and a new entrant is someone who has never worked before and is now seeking employment.

Average annual pay includes the pay of workers who are covered by state unemployment insurance laws, and federal civilian workers covered by federal unemployment. This represents approximately 89% of total civilian employment. It excludes members of the armed forces, elected officials in most states, railroad employees, most self-employed persons, and some others. Pay includes bonuses, the cash value of meals and lodging, and tips and other gratuities.

Income and poverty are two complicated and controversial areas. Rather than provide an incomplete review of the concepts and formulas used, interested readers are referred to the explanatory sections of the 1980 Census of Population which cover these matters in some detail.

Economy, Business, Industry & Agriculture

Fortune 500 and Inc. 100 companies come from a count of the annual directory published respectively by these two magazines. Business incorporations and business failure data are from Dun & Bradstreet Corporation, and is reprinted here with permission. Establishments and payroll data are from the latest available edition of County Business Patterns (Bureau of the Census). This year, results of the 1982 economic censuses, (which are done every five years, unlike the decennial census of population and the census of housing) have become available, and new expanded information is provided under manufacturing, retail trade, wholesale trade, and service industries. All other information in this category comes from Statistical Abstract.

All subgroupings in this category have been arranged by SIC (Standard Industrial Classification) Code. Under establishments, the number of establishments excludes governmental units, railroads, and the self employed.

Readers should remember that, as in other categories of the profiles, information here is largely drawn from federal government sources. There is a wealth of other information on business conditions in general as well as industry-specific information that is available from private, non-governmental sources. Besides Dun and Bradstreet, Dow Jones, and McGraw-Hill, readers may wish to explore the trade and industry association publications which cover their particular field in some depth. The Encyclopedia of Associations (published by Gale Research, and available in most libraries) provides names and addresses of almost all national associations and lists officers and selected publications.

Communication, Energy & Transportation

Information on radio and TV stations was obtained from a count of listings in Standard Rate and Data, October 1984, an advertising agency directory of commercial broadcast facilities. Energy information comes from State Energy Data Report, 1984 (Department of Energy). All other information is from Statistical Abstract.

Other energy, under the heading energy, includes wind, waste, and geothermal sources.

The Profiles

STATE SUMMARY

Capital city	Montgomery
Governor	George C. Wallace
Address	STATE CAPITOL MONTGOMERY, AL 31630 205 834-3568
Admitted as a state	1819

natural gas	17,353.9
petroleum	30,052.1
nuclear	3,251.9
hydroelectric	3,863.0
other	135.2
electricity exchanges	
by end-use sector (trillion Btu)	—
residential	14,736.4
commercial	10,714.3
industrial	25,910.2
transportation	19,146.7
electrical energy, 1983	
production (billion kilowatt hours)	2,310.3
installed capacity (million kilowatts)	658.2
gas utilities, 1982	
customers	48,417,000
sales (trillion Btu)	14,281
revenues ($mil)	63,391
prices ($ per million Btu)	$4.44
nuclear plants, 1981	77

Transportation

highway mileage, 1982	
urban	640,600
rural	3,225,700
federal highway system	
primary	298,219
interstate	42,460
urban	133,500
secondary	401,994
motor vehicle registrations, 1983	160,939,000
automobiles, 1983 (per 1,000 persons)	536
drivers licenses, 1982	
total	150,310,000
male	52.3%
drivers under 25 years old	20.2%
motor vehicle accident deaths, 1981	51,669

Comparative Tables

Note: *Rankings that are tied are listed alphabetically with the exception of the United States, which always appears as the final item in a group of ties.*
